

# CryptoMeter

We tokenize Energy for a brighter future.

When energy is generated by any user and pumped into the grid, the CryptoMeter generates an "Energy Token" that will be secured in to a Blockchain.

Energy Tokens, give owners the right of consumption of the energy that represent. Once consumed the token is destroyed.

## What are the benefits of "Energy Tokenization"?

- Tokens can be traded in an open free market, and consumed in any CryptoMeter.
- Each token will prove the source of the energy produced, so consumers may favorise green produced energy.
- Price may vary depending the offer and demand that exist.
- Does not need to be priced in fiat.
